Refer to Fig. 19. Your aircraft is cruising with a TAS of 100 kts but after covering 80 nm (D1), you find you are already 3 minutes late. If your orginal ETA was 1112, what will be your new ETA at the destination, another 80 nm (D2) along track? 1626, what will be your new ETA at the destination, another 40 nm (D2) along track?
Refer to Fig. 19. Your aircraft is cruising with a TAS of 100 kts but after covering 120 nm (D1), you find you are already 3 minutes late. If your orginal ETA was 0737, what will be your new ETA at the destination, another 60 nm (D2) along track?
Refer to Fig. 18. Your aircraft is cruising with a TAS of 140 kts but after covering 30 nm (D1), you find you are already 6 minutes late. If your orgina ETA was 1932, what will be your new ETA at the destination, another 40 nm (D2) along track?

Refer to Fig. 18. Your aircraft is cruising with a TAS of 120 kts but after covering 80 nm (D1), you find you are already 6 minutes late. If your orginal ETA was 2306, what will be your new ETA at the destination, another 100 nm (D2) along track?
ETA was 1614, what will be your new ETA at the destination, another 100 nm (D2) along track?

Refer to Fig. 19. Your aircraft is cruising with a TAS of 100 kts but after covering 60 nm (D1), you find you are already 9 minutes late. If your orginal ETA was 1529, what will be your new ETA at the destination, another 60 nm (D2) along track?
Refer to Fig. 18. Your aircraft is cruising with a TAS of 140 kts but after covering 40 nm (D1), you find you are already 3 minutes late. If your orginal ETA was 1622, what will be your new ETA at the destination, another 50 nm (D2) along track?
Refer to Fig 19. Your aircraf is cruising with a TAS of 90 kt but afer covering 40 nm (D1)you find that you are already 4 minutes late. If your original ETA was 1143, what will be your new ETA at the destination 30nm (D2) along track?
Refer to Fig 18. Your aircraft is cruising at a TAS of 90 kt but after covering 20 nm (D1) at B , you find that you are 1 minute late. If your original ETA was 1914, what will be your ETA at the destination C, if D2 is 40 nm ?
Refer to Fig 18. Your aircraft is cruising at a TAS of 120 kt but after covering 30 nm (D1) at B, you find that you are 2 minutes late. If your original ETA was 0830 , what will be your ETA at the destination C, if D2 is 60 nm ?
Refer to Fig 19. Your aircraft is cruising at a TAS of 130 kt but after covering 50 nm (D1) at X, you find that you are 2 minutes late. If your original ETA was 1224, what will be your ETA at the destination C, if D2 is 25 nm ?
Refer to Fig 19. Your aircraft is cruising with a TAS of 110 kt but after covering 60 nm (D1)you find that you are already 4 minutes late. If your original ETA was 1152, what will be your new ETA at the destination 30 nm (D2) along track?

| No. | EXERCISE - ETA Planning - ANSWERS |
| :---: | :---: |
| 1 | If you have already lost 3 minutes after travelling 80 nm (D1), you are getting 1 minute later every 27 nm . Therefore, after travelling another 80 nm (D2), you will lose another 3 minutes. Your new ETA will be 6 minutes later than the orginal ETA of 1112. Your revised estimate is 1118. |
| 2 | If you have already lost 9 minutes after travelling 30 nm (D1), you are getting 1 minute later every 3 nm . Therefore, after travelling another 40 nm (D2), you will lose another 12 minutes. Your new ETA will be 21 minutes later than the orginal ETA of 1626 . Your revised estimate is 1647. |
| 3 | If you have already lost 3 minutes after travelling 120 nm (D1), you are getting 1 minute later every 40 nm . Therefore, after travelling another 60 nm (D2), you will lose another 2 minutes. Your new ETA will be 5 minutes later than the orginal ETA of 0737. Your revised estimate is 0742. |
| 4 | If you have already lost 6 minutes after travelling 30 nm (D1), you are getting 1 minute later every 5 nm . Therefore, after travelling another 40 nm (D2), you will lose another 8 minutes. Your new ETA will be 14 minutes later than the orginal ETA of 1932. Your revised estimate is 1946. |
| 5 | If you have already lost 6 minutes after travelling 150 nm (D1), you are getting 1 minute later every 25 nm . Therefore, after travelling another 90 nm (D2), you will lose another 4 minutes. Your new ETA will be 10 minutes later than the orginal ETA of 0808. Your revised estimate is 0818. |
| 6 | If you have already lost 9 minutes after travelling 150 nm (D1), you are getting 1 minute later every 17 nm . Therefore, after travelling another 150 nm (D2), you will lose another 9 minutes. Your new ETA will be 18 minutes later than the orginal ETA of 2300. Your revised estimate is 2318. |
| 7 | If you have already lost 6 minutes after travelling 80 nm (D1), you are getting 1 minute later every 13 nm . Therefore, after travelling another 100 nm (D2), you will lose another 8 minutes. Your new ETA will be 14 minutes later than the orginal ETA of 2306. Your revised estimate is 2320. |
| 8 | If you have already lost 9 minutes after travelling 40 nm (D1), you are getting 1 minute later every 4 nm . Therefore, after travelling another 100 nm (D2), you will lose another 23 minutes. Your new ETA will be 32 minutes later than the orginal ETA of 1614. Your revised estimate is 1646. |
| 9 | If you have already lost 9 minutes after travelling 60 nm (D1), you are getting 1 minute later every 7 nm . Therefore, after travelling another 60 nm (D2), you will lose another 9 minutes. Your new ETA will be 18 minutes later than the orginal ETA of 1529. Your revised estimate is 1547. |
| 10 | If you have already lost 3 minutes after travelling 40 nm (D1), you are getting 1 minute later every 13 nm . Therefore, after travelling another 50 nm (D2), you will lose another 4 minutes. Your new ETA will be 7 minutes later than the orginal ETA of 1622. Your revised estimate is 1629. |
| 11 | Point X is 40 nm from A so you have lost 4 minutes in 40 nm . You have 30 nm to go so you will lose another 3 minutes from X to C . Your original ETA was 1143 and you will be 7 minutes late when you arrive at C. Your revised ETA at C will be $1143+7=1150$. |
| 12 | Point $B$ is 20 nm from $A$ so you have lost 1 minutes in 20 nm . You have 40 nm to go so you will lose another 2 minutes from $B$ to $C$. Your original ETA was 1914 and you will be 3 minutes late when you arrive at C. Your revised ETA at C will be $1914+3=1917$. |
| 13 | Point B is 30 nm from A so you have lost 2 minutes in 30 nm . You have 60 nm to go so you will lose another 4 minutes from $B$ to $C$. Your original ETA was 0830 and you will be 6 minutes late when you arrive at C. Your revised ETA at C will be $0830+6=0836$. |
| 14 | Point $X$ is 50 nm from A so you have lost 2 minutes in 50 nm . You have 25 nm to go so you will lose another 1 minutes from $X$ to $C$. Your original ETA was 1224 and you will be 3 minutes late when you arrive at C. Your revised ETA at C will be $1224+3=1227$. |
| 15 | Point $X$ is 60 nm from A so you have lost 4 minutes in 40 nm . You have 30 nm to go so you will lose another 2 minutes from $X$ to $C$. Your original ETA was 1152 and you will be 6 minutes late when you arrive at C. Your revised ETA at C will be $1152+6=1158$. |
